Remote key delivery

If you manage an accommodation business such as a small hotel or a B&B, or you rent out an apartment, your guests can check in at any time. You can use the Remote Key Delivery function on locks of the Smart range to:

- give your guests the possibility of remote access
- manage your hospitality business remotely and while on the move
- offer your guests an unforgettable experience based on comfort and innovation.

PAY PER USE

Remote key delivery is a Pay per Use service that you can add at any time using the two additional free apps Argo Host and Argo Guest, and the Argo Cloud platform (only available for the Argo remote virtual key delivery service). It's an additional, optional service on top of the standard Argo system, with a price charged only when it's effectively used. Every time Argo Host generates a virtual key, the key credit on the account is reduced by one unit. A single virtual key can, however, be shared by all the guests of the same room, in the same period of stay, and for all the public doors on the path to the room.

The remote key delivery function can be used for guests, whereas staff and all permanent users can use the free invitations function to register their telephones on the lock.

Argo Host and Argo Guest require an Internet connection to the Cloud platform of the Argo remote key delivery service.

KEY CREDIT

A virtual key count is associated with each system, to store the key credits. Each virtual key issued reduces the credit by one unit. The host can “reload” virtual key credits by activating the Argo credit reload codes.

The Argo reload codes are hidden on reload scratch cards that have a 12-month validity: you need to reload your account at least every 12 months, otherwise your credit will be frozen.

When you reload, previously frozen credits will also be reactivated. The account will be permanently deleted if 24 months have gone by since the last reload.

VIRTUAL KEYS

Argo Host sends the virtual keys to Argo Guest via e-mail, text message or any other communication app.

OPEN DOOR

Your guest opens Argo Guest and presses the button corresponding to the door that he/she is authorised to open.

With Argo Host, a virtual key can be revoked at any time and a new one can be issued in the event of a room change or an extension to the guest's stay.
